

Designed and manufactured in the UK.

AQUA LINK.

The world's number-one centralised dispense system.

A centralised and fully monitored water distribution system that delivers high volumes of chilled water – still and sparkling – to multiple dispensers throughout an entire building.

HOW DOES AQUA LINK COMPARE TO OTHER CENTRALISED DISPENSE SOLUTIONS (CDS)

Aqua Link saves space at the dispense points and reduces costs. Aqua Link also helps minimise your water use and any impact on the environment from your water systems.

1

LED UV (precluding 99.99% water-borne pathogenic bacteria) opposed to UV lamps used in other CDS systems.

2

R290 cooling technology - 50% more efficient with higher recovery rates than other CDS systems.

3

Dual-pump system guarantees ZERO DOWNTIME. Always two operational pumps to provide a back-up solution. Other CDS systems feature only one pump, which must be operational at all times.

4

Fully controllable water supply with ECO mode to suit clients' needs and to help clients meet their WELL building objectives.

5

Ultra-high capacity carbonator - provides over three times bigger reserve to facilitate large volumes.

6

Smart Control - The Aqua Link Control Unit (ALCU) provides dynamic reporting on:

1. Water meter (volume dispensed)
2. Flow rate
3. Temperature of water with high/low safety controls
4. Incoming mains water pressure
5. Leak detection
6. CO2 replacement management
7. Automatic notifications to the client helpdesk and the Aqua Libra Co team for immediate response.
